## Research Update:

# Ecopetrol S.A. 'BBB-' Ratings Affirmed; Outlook Remains Stable

## Overview

- Colombia-based oil and gas company Ecopetrol continues to post a solid financial performance and maintain production levels despite operating disruptions in 2017.
- We expect Ecopetrol to continue to benefit from favorable crude oil prices. We're affirming our ratings on the company, including our 'BBB-' long-term corporate credit rating. The stand-alone credit profile (SACP) remains at 'bb+'.
- The stable outlook reflects our view that Ecopetrol will continue to play a very important role in the Colombian economy and maintain its very strong link to the government.

## Rating Action

On June 27, 2018, S&P Global Ratings affirmed its 'BBB-' long-term corporate credit rating on Ecopetrol S.A. The outlook remains stable. At the same time, we affirmed our 'BBB-' rating on its senior unsecured debt. The company's SACP remains unchanged at 'bb+'.

## Rationale

The affirmation reflects Ecopetrol's solid financial performance despite slightly lower production in 2017. Despite the natural decline of the company's oil and gas fields and the attacks on the Caño Limón-Coveñas pipeline, which was out of operations for about half of the year, Ecopetrol maintained total production similar to the 2016 level. The production reached 715,000 barrels oil equivalent per day (boed) at the end of 2017. Nonetheless, higher oil prices and the company's cost discipline allowed it to report solid key credit metrics with a debt to EBITDA below 2x, EBITDA margins above 40%, and discretionary cash flow (DCF) generation.

The modernization of the Cartagena refinery and its recent stabilization stage have increased the company's downstream segment for a total throughput to about 359.4 thousand barrels of oil per day (Mbd) during the first quarter of 2018, a 18% increase compared with the same period of 2017. At its midstream segment, to mitigate the impact of the attacks on the Caño-Limón Coveñas oil pipeline, the company used the Bicentenario pipeline bi-directionally to prevent the generation of deferred production in the fields next to the

pipeline. We expect the company's downstream and midstream segments to post a solid operating performance in 2018.

The company will focus on expanding its reserve base through ongoing exploration projects in Colombia and outside the country. In 2017, Ecopetrol received license agreements to explore two shallow water blocks (blocks 6 and 8) in Mexico. This represents an opportunity for the company to expand its reserve base and quality of its oil production, which currently mostly consists of heavy oil. As of Dec. 31, 2017, Ecopetrol's proven hydrocarbon reserves totaled 1,659 mmbob. Although reserve replacement for the year was 126%, the three-year average reserve replacement continues to be low--at 41.7%--that is lower than that of other international companies and has been a key credit concern.

Our rating also reflects our assessment of a very high likelihood that the Colombian government will provide timely and sufficient extraordinary support to Ecopetrol under a financial distress scenario. We view Ecopetrol as playing a very important role in Colombia, given its position as the largest company in the country. Ecopetrol has a significant presence in Colombia's oil and gas sector, acts as the main supplier of oil-derived products in the domestic market, and has a very strong link with the government, which has the controlling ownership and strategic oversight despite the company's independent management. As a result, the company's rating benefits from one-notch of support from its SACP.

In line with company's strategy to focus on capital discipline, cash flow generation, cost efficiency, and profitable growth in the exploration and production (E&P) segment, we expect debt to EBITDA and DCF to debt to continue improving in 2018. This will be mainly stem from recovering oil prices, a lower spread between Ecopetrol's crude basket prices and Brent, and continued operating efficiencies.

Our base-case scenario assumes the following factors:

- A slight increase in production levels to approximately 725,000 boed in 2018. This will result from efficiencies in production facilities, mitigated by the natural decline of the fields, lower volume of gas sales, and the temporary closure of the Cano-Limon Covenas pipeline. For 2019, an output of 740,000 boed thanks to higher estimated capex mostly for the E&P segment and projects to increase the recovery factor of existing mature fields.
- Average realized sale price of \$58.5 per barrel of oil equivalent (boe) during 2018 and 2019. This price level ultimately depends on our price assumption for Brent crude oil at \$65 per oil barrel (bbl) for 2018 and \$60 per bbl for 2019, minus \$7 per bbl given the recent improvement of the Vasconia oil price. However, we expect a higher spread in 2020, resulting from changes in the International Marine Organization specifications for marine pollution stemming from crude and fuels with high sulfur content.
- The company to focus on achieving structural efficiencies, such as

continuing to reduce the dilution costs of heavy crude and implementing more efficient procurement and services strategies.

- Annual capex of \$3.0 billion - \$3.5 billion in the next two years, of which 90% will be for E&P, because the company has finished all of its midstream and downstream projects.
- Dividend payments of around 40% for the next two years.
- The company to pay debt as it comes due.

These assumptions result in the following credit measures:

- EBITDA margin of more than 40% for the next two years;
- Adjusted net debt to EBITDAX (EBITDA plus exploration expenses) of about 1.4x in 2018 and 1.3x in 2019;
- Adjusted FFO to debt of 47% in 2018 and 48% in 2019; and
- DCF to debt of more than 10% for the next two years.

## **Liquidity**

We continue to assess Ecopetrol's liquidity as strong, which benefits from a lower cost structure and more favorable oil prices. Our assessment reflects our expectation that the company's sources of liquidity will exceed its uses by more than 1.5x in 2018 and remain above 1x for the subsequent 12 months. Ecopetrol can withstand high-impact, low-probability events, has sound banking relationships and satisfactory access to capital markets.

Principal Liquidity Sources:

- Cash balances of about \$2.8 billion as of March 31, 2018;
- Cash FFO of slightly more than \$6.03 billion for the next 12 months; and
- Undrawn committed credit lines for \$335 million.

Principal Liquidity uses:

- Debt maturities of about \$910 million as of March 31, 2018;
- Working capital outflows of \$510 million for the next 12 months;
- Capex of around \$3.2 billion for the next 12 months; and
- Dividends of about \$820 million for the next 12 months.

## **Outlook**

The outlook on Ecopetrol reflects the stable outlook on the Republic of Colombia. We expect the company to continue to play a very important role in the Colombian economy and to maintain its very strong link with the government. Therefore, we believe that the ratings on Ecopetrol would most likely move in tandem with those on the sovereign.

### Downside scenario

We will lower the ratings on Ecopetrol if we were to lower the sovereign ratings. We could lower our SACP if the company's production growth or oil prices are lower than expected, reducing EBITDA. A downgrade is also possible if Ecopetrol incurs additional debt, which could increase the company's debt metric to above 3.0x and DCF to debt is lower than 5%, leading to a revision of the company's financial risk profile to a weaker assessment.

### Upside scenario

An upgrade will follow the same rating action on the sovereign. Additionally, the SACP could improve to 'bbb-' if we have see a longer track record of debt to EBITDA remaining below 1.5x, coupled with a DCF to debt at or above 15% amid oil price volatility.

## Ratings--Subordination Risk Analysis

### Capital structure

Ecopetrol's debt currently totals COP40.96 billion, consisting of several senior unsecured bonds with maturities between 2018 and 2045, and two subordinated unsecured notes maturing in 2020 and 2040. The debt at the subsidiaries' level (OCENSA, ODL, Bicentenario, and Bioenergy) totals about COP3.9 billion.

### Analytical conclusions

Ecopetrol's unsecured debt at the subsidiaries level represents around 19% of the company's total debt, which is well below our priority debt ratio of 50%. As a result, we rate the senior unsecured notes 'BBB-', which is in line with the corporate credit rating.
